Trainline Partner Solutions has integrated Renfe and Iryo into Concur Travel, enabling corporate travel bookings across multiple train operators on a single platform

- **The integration enables users to book Renfe and Iryo services on a single platform within Concur Travel, simplifying the management of business travel**

London, 18 June 2026 – Trainline Partner Solutions, the B2B arm of independent train and bus booking platform [Trainline](#), has announced the integration of Renfe and Iryo's rail content into Concur Travel, thereby expanding multi-operator rail booking capabilities for business travel in Spain. Thanks to this collaboration, corporate travellers will be able to book both Renfe and Iryo services within a single digital environment, consolidating the entire range of available rail services on a single platform and reinforcing the commitment to simplifying and centralising business travel management.

This integration represents a step forward in terms of operational efficiency, as it reduces booking times for travellers and travel managers, facilitates the comparison of fares between different operators and improves spend visibility, contributing to better decision-making and potential cost savings. Furthermore, it enhances reporting and spend control capabilities for corporate travel within Concur Travel.

The integration also supports online refund capabilities for Concur Travel customers, allowing travellers and travel managers to manage post-booking needs with greater ease directly within the platform. As part of the next phase of the integration, digital ticket exchanges are also in development, which will further streamline aftersales management and provide particularly significant added value for Travel Management Companies (TMCs) by optimising processes and increasing productivity in day-to-day travel management.

The integration in Spain forms part of Trainline Partner Solutions' European expansion strategy with SAP Concur, which has already rolled out similar solutions in markets such as the UK and Switzerland, and which continues to advance the consolidation of a digital and connected rail ecosystem across the continent.

With this initiative, Trainline also reinforces the positioning of rail as a sustainable and competitive alternative to air travel on short and medium-haul routes, in line with European objectives to decarbonise transport and promote a modal shift towards options with a lower environmental impact.

The collaboration between Trainline and SAP Concur, together with Renfe's and Iryo's participation as operators integrated into the system, highlights the growing role of

interoperability among players in the corporate travel ecosystem and helps to improve competitiveness, transparency and choice for businesses in an increasingly liberalised rail market.

“This integration marks another great milestone for Trainline Partner Solutions, and is another step towards making business travel by rail simpler and more connected across Europe. Integrating Renfe and Iryo into SAP Concur will offer travel management companies a seamless booking and aftersales experience, while offering travellers greater choice across Spain’s high-speed network” says Andrew Cruttenden, General Manager at Trainline Partner Solutions

About Trainline

Trainline is the leading independent platform for train and bus ticket sales for millions of travellers worldwide. Through its website and mobile app, users can search, book and manage their journeys in one place. Trainline Partner Solutions is its B2B division, offering rail distribution technology solutions to corporates, travel management companies and travel platforms across Europe. With over 55 million app downloads worldwide, Trainline has operated in Spain since 2016 and has agreements with more than 30 train and bus operators in the country, including Renfe, Iryo, Ouigo and Alsa.
